

Attracting Tomorrow

Comply with EMC standards faster and easier

EMC compliance testing is one of the last stages in a project's development. Exceeding EMI limits or failing immunity surge testing can result in delays to your schedule, cost increases or even safety recertification

TDK-Lambda's R series of EMI and EMC filters offers a huge range of package styles, current ratings and input voltages. Our filters with surge suppression use TDK's amorphous core technology with a higher resistance to saturation from high voltage pulses and greater long term reliability.

- 0.5A to 300A
- 250Vac to 500Vac
- Short circuit current ratings (SCCR)
- DIN rail options
- Captive hardware to avoid lost screws and terminal covers

Knowledge is power, Power is TDK-Lambda. #powerguy
